

Nikhil KG

Senior Data Analyst

Bengaluru, Karnataka | Email: nperaje@gmail.com | Mobile: 9845592709 | LinkedIn: <https://www.linkedin.com/in/kgnikhil>

Portfolio: <https://nikhil-portfolio-delta-one.vercel.app/index.html>

SUMMARY

Data Analyst with 7 years of experience turning complex, ambiguous data problems into clear, actionable business recommendations. Strong hands-on expertise in Advanced SQL and Python for exploratory data analysis (EDA), combined with a track record of owning analytics — from data extraction through insight generation. Skilled at translating raw data into dashboards and reports that drive operational and business decisions, with experience spanning SaaS, financial services, and enterprise operations.

SKILLS

AI: AI Workflow Automation, Prompt Engineering, LLM Based Workflows, Semantic Search
SQL & Data Analysis: Advanced SQL, PostgreSQL, BigQuery, Data Extraction, Data Mining
Python & EDA: Pandas, Exploratory Data Analysis, Data Wrangling, Regex, Web scraping, NLTK, Scikit-learn
Analytics & Insights: End-to-End Analytics, Business & Product Problem solving, Root-Cause Analysis
Visualization & Reporting: Tableau, Power BI, Looker Studio, Metabase, Dashboarding, DAX, Power Query
Stakeholder & Business: Stakeholder Communication, Cross-functional Collaboration
Data Engineering & Automation: ETL, Data Ingestion, REST API Integration, Google Apps Script

PROFESSIONAL EXPERIENCE

Data Operations Specialist

BetterCloud

03/2024 – Present

- Launched an AI driven automation leveraging Gemini Flash via Vertex AI to enrich a SaaS product database by generating complete structured product entries and batch-fetching logos, eliminating 100% manual dependency and shipping 1000+ products.
- Designed an app-identification system using sentence embeddings (MiniLM) and a trained logistic regression classifier to distinguish legitimate SaaS products from noise in raw SSO login data, then mapped identified apps to canonical product names via cosine similarity — cutting noisy/unidentified entries by 30%, improving the accuracy of enterprise app inventories and reducing turnaround time of customer tickets by 2 days to 1.
- Implemented an automation tool that matches customer-specific service names to standard product taxonomy using confidence-based scoring, streamlining the License Taxonomy process and reducing manual effort by 80%.
- Pioneered a Google Apps Script automation to track contract file uploads, processing status, and TAT, reducing manual tracking effort by 90%
- Integrated data into Looker Studio for real-time analytics, enabling insights into upload volume, processing stages, and TAT deviations, cutting analysis time by 70%.
- Built a BigQuery SQL benchmarking engine to normalise multi-model SaaS contract pricing across customers, enabling data-driven vendor negotiations via per-seat monthly cost comparisons.

Sr Data Operations Associate

G2.com

10/2021 - 03/2024

- Established Python script to identify SaaS products in financial transactions(unstructured data), reducing manual efforts by 80% using custom NLTK libraries(stopwords).
- Automated end-to-end contract data analysis with Google Apps Script, JSON extraction, Google sheet integration for historical and forecasting KPIs, presented in Looker Data Visualisation, resulting in a 90% reduction in manual efforts in reporting.
- Applied an integrated solution utilizing Egnyte API and Slack API within the automation project, enabling real-time alerts in a Slack channel detailing the number of contract files uploaded for the previous day.
- Delivered an automation solution saving 200+ annual hours, handling movement of 3000+ files, and enhancing operational efficiency.
- Generated reports and monthly metrics efficiently using SQL queries, significantly reducing manual preparation time by 80% and streamlining data analysis processes
- Launched JavaScript application to generate regex patterns from transaction descriptions, saving manual efforts by 90% and optimizing data processing efficiency
- Led strategic initiatives to drive organizational growth and innovation, fostering cross-functional collaboration and delivering impactful results
- Provided actionable recommendations for process improvement, customer experience, stakeholder management and team efficiency.

Data Operations Associate

Preqin

11/2020 - 10/2021

- Conducted independent research and analysis on firm, fund, and transaction activity across the alternative asset universe to support data accuracy initiatives.
- Improved database accuracy by 90% by extracting and validating key financial metrics from annual reports into the CRM, eliminating data inconsistencies.
- Proposed a keyword-based classification approach for a Chrome extension, reducing news-article tagging time by 60%
- Took ownership of a critical operational process end-to-end and mentored junior team members on analysis best practices.

Sales Operations Associate

Hewlett Packard Enterprise

03/2019 - 11/2020

- Built and published Power BI dashboards using DAX and Power Query to surface critical KPIs for strategic planning.
- Engineered an AutoHotKey (AHK) script, reducing team data-handling time by 50% through seamless extraction and consolidation from multiple sources, eliminating the need for repetitive navigation across webpages.

CERTIFICATIONS

IBM Data Engineering - Issued by Coursera

EDUCATION

Bachelor of Engineering
Computer Science and Engineering
NMAM Institute Of Technology
